Subject: RE: Atlantic Relocation walk through 4/10/15

Thanks!

Dave, I was planning on 9, but we can do whatever time works for you. I also left a message with Jason LeMaster, Hamilton Co Health Dept, in case they want to have someone along. Whatever works for your two schedules. – The PRP contractor will be onsite all day and will also accompany us.

The spill affected 2 miles of Cheeney Creek and other drains. The purpose of the walk is to inspect their progress and (presumably) begin scaling back their containment/sorbent boom deployment in farther downstream areas. We'll look for sheen on water and for the presence or absence of oiled vegetation or debris to decide it's okay to remove booms. – There's a lot of biological sheen and foam gathering at some booms where no oil has been showing up; it's probably time to remove some of the boom, we'll be there to inspect in-person and consent.

Subject: Atlantic Relocation walk through 4/10/15

Jason, DD has agreed to do a walk through tomorrow morning. Just let him know the time and place. To my knowledge, DD has not been on this site yet.
